

# S/F Twisted Brush

## S/F Twisted Brush (Single flat spiral type)

- By twisting one flat wire, there is no need to solder the end of the brush

S/F Type

S Type

- By adjusting the shape of the tip, the direction of the filament is turned forward → It is also effective for burrs at the bottom of the hole.

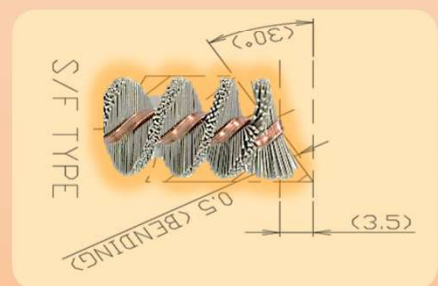

0.5 (Bending) 1.5 (Soldering)

S/F Type

S Type

- S/F twist brushes have more filaments at the tip than twist brushes with round wires
